

Picture perfect

Our brilliant new Toshiba short-throw projector

Feast your eyes on the industry-defining new short-throw projector from Toshiba. It's set to change the way you sell projectors into the education sector, forever.

The new generation is here. The new Toshiba short-throw projector puts your customers' LCD projectors in the shade. It's uniquely based on new DLP® (BrilliantColor Digital Light Processor) technology developed by Texas Instruments (TI).

Combined with Toshiba's new Natural Colour Enhancer 4, the Toshiba short-throw projector projects an amazingly sharp and vibrant image onto the interactive whiteboards that are already installed in over 60% of the UK's schools. So what are you waiting for?

Open your eyes to an exciting new profit opportunity

Over 100,000 worn-out projectors are due for replacement in UK schools over the next two years and there are over 250,000 SMART Boards™ already in place that can easily be retrofitted with the new Toshiba short-throw projector.

This is the perfect opportunity to revisit your existing customers and help them maximise their SMART investment, breathing new life back into their 5 and 6 series whiteboards.

“Teachers can achieve a bright picture without closing curtains or blinds – letting light back into the classroom.”

Outstanding features that your customers will love

One easy integrated package

Each integrated package includes; Toshiba short-throw projector, optional protective cage, an easy-to-install wall mount bracket – avoiding difficult ceiling installations and causing minimal disruption in the classroom, and a wall-mounted control panel. The package is easy to set up and operate and fully compatible with all classrooms.

Lighten up the classroom

Teachers can achieve a bright picture without closing curtains or blinds – letting light back into the classroom.

A user-friendly control panel

Forget fiddly remote controls, PIN codes and batteries: the Toshiba short-throw projector's simple control panel couldn't be easier. Powered by the projector, it has a simple one-button switch on, making it easy to set up and switch between feeds.

Bring new vibrancy and colour to lessons

TI's BrilliantColor DLP technology combined with Toshiba's Natural Colour Enhancer 4 delivers exceptional colour, vibrancy and image resolution – making working with images and multimedia even more engaging for pupils.

Theft and damage protection

An optional protective cage around the projector helps to shield it from harm and safeguard your customer's investment.

Turn innovation into educational advantage, re-energise your existing SMART customer base and win sales with the new Toshiba short-throw projector.

Brilliant new margins are there for the taking.

Won't fade over time

This new technology combination means that colours won't fade, delivering a longer projector life and attractive ROI.

Reduce shadows

The Toshiba short-throw projector is designed to be sited very close to the whiteboard and angled, dramatically reducing shadow effects and glare. This makes it a more flexible classroom tool, easier for teachers and pupils to use.

This powerful package is brought to you by Steljes, the UK experts in education.
